Raise your hand for help!

# SheCode Session 2

HTML/CSS

# Last Week Recap

- Who are we?

- Name

- Year

- Major

- Why we started computer science/A problem we'd like to solve using programming

# Last Week Recap

- What is Scratch?
  - Visual programming language

# What is the Internet?

# What is the Internet?

## Ice Breaker -5m

Introduce yourself to your table (name, grade, hobbies)

Come up with one big way that the Internet has changed the world. Be ready to share! (there will be candy)

A decorative grey shape, resembling a quarter-circle or a stylized 'C', is positioned to the left of the section header.

## Front-end Development

- Means writing the code that determines how the content of a website is displayed
  - Includes basically anything the user can interact with (images, text, buttons, etc)
  - Uses 3 main languages: **HTML. CSS, Javascript**
- Back-end development (which we won't be doing) has to do with the behind-the-scenes work such as databases and servers

A decorative grey shape, resembling a quarter-circle or a stylized 'C', is positioned to the left of the main title.

# What is HTML? CSS? JS?

HTML (hypertext markup language)

- marks the content up into different structural types, like paragraphs, blocks, lists, images, tables, forms, comments etc.
- the actual content of web page (“bones”)

A decorative gray shape, resembling a quarter-circle or a stylized 'C', is positioned to the left of the main title.

# What is HTML? CSS? JS?

CSS (cascading style sheets)

- tells the browser how each type of element should be displayed, which may vary for different media (like screen, print or handheld device)
- style of web page (“skin”)

A decorative grey shape, resembling a quarter-circle or a stylized 'C', is located to the left of the main title.

# What is HTML? CSS? JS?

JavaScript (we're not programming in this)

- tells the browser how to change the web page in response to events that happen (like clicking on something, or changing the value in a form input)
- any animations, moving things (“muscles”)

# What is HTML?

# CodeHS HTML Course

# CodeHS HTML Lesson 1

- HTML is essentially just normal text + “markup tags”
  - These tags tell the browser how to display the text
- HTML tags:
  - Enclosed in angle brackets `<h1>`
  - The tags themselves are not displayed on the web page
  - Tell the browser how text should be displayed

# CodeHS HTML Lesson 1 cont. Hello, world!

Tag structure: **Opening tag** Text/Content **Closing Tag**

**<h1>**Hello, world!**</h1>**

# CodeHS HTML Lesson 2: Basic HTML Page

```
<!DOCTYPE html>
<html>
  <head>
    <title>My First Document</title>
  </head>
  <body>
    <h1>My First Heading</h1>
    <p>My first paragraph.</p>
  </body>
</html>
```

# CodeHS HTML Lesson 2: Basic HTML Page

```
<!DOCTYPE html>
```

```
<html>
```

```
  <head>
```

```
    <title>My First Document</title>
```

```
  </head>
```

```
  <body>
```

```
    <h1>My First Heading</h1>
```

```
    <p>My first paragraph.</p>
```

```
  </body>
```

```
</html>
```

# CodeHS HTML Lesson 2: Basic HTML Page

```
<!DOCTYPE html>
```

```
<html>
```

```
  <head>
```

```
    <title>My First Document</title>
```

```
  </head>
```

```
  <body>
```

```
    <h1>My First Heading</h1>
```

```
    <p>My first paragraph.</p>
```

```
  </body>
```

```
</html>
```

# CodeHS HTML Lesson 2: Basic HTML Page

```
<!DOCTYPE html>
<html>
  <head>
    <title>My First Document</title>
  </head>
  <body>
    <h1>My First Heading</h1>
    <p>My first paragraph.</p>
  </body>
</html>
```

# CodeHS HTML Lesson 2: Basic HTML Page

```
<!DOCTYPE html>
<html>
  <head>
    <title>My First Document</title>
  </head>
  <body>
    <h1>My First Heading</h1>
    <p>My first paragraph.</p>
  </body>
</html>
```

# CodeHS HTML Lesson 2: Basic HTML Page

```
<!DOCTYPE html>
<html>
  <head>
    <title>My First Document</title>
  </head>
  <body>
    <h1>My First Heading</h1>
    <p>My first paragraph.</p>
  </body>
</html>
```

## Important points

- Content goes between opening and closing tags
- Tags can be nested (go inside other tags)
- Indenting the code shows the structure of the tags

## CodeHS Lesson 2. Examples + Exerci

```
<!DOCTYPE html>
<html>
  <head>
    <title>My First
Document</title>
  </head>
  <body>
    <h1>My First Heading</h1>
    <p>My first paragraph.</p>
  </body>
</html>
```

## CodeHS Lesson 3: Formatting Text

- So far, we've built standard web pages, but now it's time for some `<i>style</i>`
  - Using HTML formatting
  - Tags that let us format text on our web pages

## The `<p>` Tag

- Tag `<p>` - Paragraph of text
  - Gives an automatic newline after a `<p></p>`
  - Compare:

`<p>Potato</p>`

Potato

`<p>Tomato</p>`

Tomato

# The Heading Tag

```
<h1>This is an h1</h1>
```

**This is an h1**

```
<h2>This is an h2</h2>
```

**This is an h2**

```
<h3>This is an h3</h3>
```

**This is an h3**

```
<h4>This is an h4</h4>
```

**This is an h4**

```
<h5>This is an h5</h5>
```

**This is an h5**

```
<h6>This is an h6</h6>
```

**This is an h6**

## The `<i>` Tag and `<b>` Tag

- Tag `<i>` - Italicized text
- Tag `<b>` - Bolded text

`<i>`Potato`</i>`

`<b>`Tomato`</b>`

## The `<hr>` Tag and `<br>` Tag

- Tag `<hr>` - Horizontal Rule (line across screen)
  - No closing tag
- Tag `<br>` -Line Break (new line)
  - No closing tag

`<hr>`

`<br>`

## Prediction

<p>

P. Sherman

42 Wallaby Way

Sydney, Australia

</p>

## Prediction

<p>

P. Sherman<br>

42 Wallaby Way<br>

Sydney, Australia<br>

</p>

## Prediction

<p>

This is <i><b>very important!</b></i>

</p>

A decorative grey arc is positioned to the left of the section header. The header itself is the text 'Review of Formatting Tags' in a bold, dark grey, sans-serif font.

## Review of Formatting Tags

<code>&lt;p&gt;</code>	paragraph
<code>&lt;i&gt;</code>	<i>Italic</i>
<code>&lt;b&gt;</code>	<b>Bold</b>
<code>&lt;hr&gt;</code>	horizontal rule
<code>&lt;br&gt;</code>	Line Break
<code>&lt;h1&gt;,&lt;h2&gt;...&lt;h6&gt;</code>	headings (h1 = largest, h6 = smallest)

## Explore Lesson 3 Example + Exercise

- Raise your hand for help from a TA!

# A few more HTML tags

## Links: the `<a>` tag

- Take us to other web pages
- Normally appear blue with an underline
- Links need to specify the text to display and the address where the link should take you
  - Do this by adding an attribute to the `<a>` tag:

`<a href="https://google.com">DISPLAYED TEXT</a>`

## Images: The <img> Tag

- No closing tag

A decorative grey shape, resembling a quarter-circle or a stylized 'C', is positioned to the left of the section header.

## Commenting

- Good practice because you WILL forget what the code you wrote represents sometimes (also allows others to read your code more easily)
- Put anywhere in html file:

```
<!-- Hi, I'm a comment that won't show up in the  
browser at all because I'm awesome. -->
```

**So that was a lot of things. Let's rev**

- In HTML, there are different tags that let us format our text in different ways
  - Most of the time, we need an opening tag, text, and a closing tag: `<p>Paragraph</p>`
- The tags can have attributes themselves in the case of images and links:
  - `<a`  
`href="https://www.google.com">Google</a>`

**Break :) Grab some food!**

## Starting repl.it project

<https://repl.it/>

# Website project

It's time to get to work making your own websites! Be creative, you can make a website about almost anything! Some ideas:

- An autobiography
- A biography/tribute page
- A news/sports site
- The possibilities are endless!

If you get stuck or confused, check out the HTML lessons on the web design course on [www.codehs.com](http://www.codehs.com), [https://www.tutorialspoint.com/html/html\\_tags\\_reference.htm](https://www.tutorialspoint.com/html/html_tags_reference.htm), or [https://www.w3schools.com/html/html\\_basic.asp](https://www.w3schools.com/html/html_basic.asp).

# What is CSS?

# Next SheCode

# 10/29

See you then!
